

● A Smart Net Zero service

Smart Energy Management

Data-led energy intelligence to reduce cost, cut carbon and optimise operational performance.

Real-time insight.
Smarter decisions.
Lower energy. Lower carbon.

What we do

Helping organisations take control of energy use, reduce cost and cut carbon.

Monitor & Visualise

Real-time energy data and intelligent dashboards across sites and assets.

Optimise & Reduce Costs

Identify inefficiencies and opportunities to lower energy spend.

Reduce Carbon Emissions

Actionable insights to help you meet net zero targets and reporting requirements.

Who we help

Built Environment

Offices, campuses, retail, healthcare, education and mixed-use assets.

Industry & Operations

Manufacturing, logistics and industrial sites seeking efficiency and resilience.

Public Sector

Local authorities and public organisations improving energy performance.

Key solutions & focus areas

Practical energy solutions that help organisations monitor, optimise and decarbonise building and operational performance.

1. Energy Monitoring & Visualisation

Live dashboards, advanced analytics and metering insight provide complete visibility across sites and assets.

2. Optimisation & Control

Identify waste, fine-tune operations and automate controls to reduce unnecessary consumption.

3. Asset Performance & Efficiency

Optimise HVAC, lighting, plant and equipment to extend asset life and improve performance.

4. Carbon Reporting & Action

Turn energy data into carbon insight, reporting and targeted improvement plans to drive real progress.

Focus areas

Buildings

Offices, campuses, retail, healthcare, education and mixed-use assets.

Industrial Sites

Manufacturing, logistics and process facilities driving efficiency.

Public Estate

Local authorities and public organisations improving energy performance.

Multi-site Portfolios

Centralised visibility and control across multiple sites and regions.

Our Smart Energy Management Platform

Transform live energy and building data into actionable insight, optimisation and measurable savings.

1. Real-time monitoring

Live visibility of energy use, systems and site performance.

2. Insight & analytics

Advanced analytics turn data into actionable insight.

3. Optimisation & control

Intelligent control and optimisation to reduce costs and energy.

4. Reporting & carbon visibility

Measure performance and showcase impact with confidence.

Utility & sub-meter integration

Connect all utility and sub-meters seamlessly for complete data coverage and accuracy.

Asset & equipment performance

Monitor critical assets and systems to maximise uptime, efficiency and lifespan.

Automated alerts & anomaly detection

Proactive alerts and AI-driven anomaly detection to resolve issues before they escalate.

Compliance, ESG & energy reporting

Streamline compliance and deliver ESG and energy reports with audit-ready confidence.

Your Smart Energy Management Journey

A proven, four-step approach to help you reduce cost, cut carbon and improve energy performance.

01

Assess & Discover

We assess your energy use, assets and operations to establish a clear baseline of performance and opportunities.

02

Plan & Prioritise

We develop a tailored energy management plan, prioritising quick wins and high-impact initiatives.

03

Implement & Integrate

We implement solutions, integrate systems and engage your teams to deliver lasting improvements.

04

Optimise & Evolve

We continuously monitor, analyse and refine performance to keep you ahead of targets and legislation.

Your partner at every step

We combine technology, expertise and actionable insight to help you achieve lower cost, lower carbon and better performance—sustainably.

Expert guidance
Practical solutions
Measurable results

Why Smart Net Zero?

We combine technology, expertise and practical insight to deliver real results.

Sustainability at our core

Helping organisations achieve net zero and build a more sustainable future.

Data-led decisions

Turning real-time data into clear insights and smarter actions.

End-to-end expertise

Strategy, technology and delivery – all under one roof.

Proven impact

Measurable results that reduce cost, cut carbon and improve performance.

Trusted partner

Long-term relationships built on trust, transparency and results.

**Real impact.
Measurable results.**

15–30%

Typical energy
cost savings

20–40%

Reduction in
carbon emissions

Fast

Typical payback
within 12–24 months

Continuous

Ongoing optimisation
and improvement
